

# SPIN

# 20

# Spin 20

This is a great game to practice counting to 20. For this activity, students can play with a partner, a small group, or play individually. Each player will need their own game mat and they will need a pencil and a paperclip to make a spinner. Students will take turns spinning the spinner on their game mat. They will read the number and place that many counters/manipulatives on their ten frame. First person to get to 20 is the winner.
